FLORIDA EDUCATION

OFTENTIMES, school people involved as they are in the mechanics of education, are inarticulate as to the ultimate goal; it is easy to lose sight of the ends for which they strive. It is well to stop occasionally and ask of educational practices, policies, and procedures: "Why is this done?" and "for whom?"

Answers to these questions would not be long in forthcoming, and there would be no divided opinions. School people recognize that everything attempted and accomplished in the field of education, in all of its many areas and activities, its regulations, policies, and procedures, is aimed at but one goal: that of providing for the people of Florida—the best in educational opportunities and facilities. Yet, in reports, analyses, and educational dissertations this goal rarely is mentioned.

The various programs and supporting activities with which school people work daily in transforming plans into practice represent not the end in themselves, but the means to the end—the educational growth and development of Florida's people. In this report an attempt will be made to analyze and examine the growth of education in Florida in terms of what it has done for the boys and girls and adults enrolled in Florida's public school system.

AS THE result of the last twelve years of educational activity, Florida's people now have greater opportunities for learning than ever before. The scope of the educational program has been extended to provide more services for more of the people. The quality of instruction has been improved. Better facilities and learning aids are in use. Educational funds are more wisely spent. And all this has been accomplished through the cooperative efforts of all of our people—a living demonstration of democratic procedures.

THERE is now available in Florida a broader educational program, better equipped to serve more of the people, more of the time, meeting more of their needs.

The need for a wider range of school services has long been recognized. People of all age levels have needs which can best be served by the development and expanding of the instructional facilities of the public schools. School children, and adults, during their relatively brief contact with formal education deserve an education which is all-inclusive, preparing them for all the aspects of living and the uncertain future which lies ahead.

As a result of these needs the scope of the educational program in Florida has been increased. The age groups now served by the public schools range from kindergarten children to junior college youth and adults.

The kinds of services at these levels include varied aspects of education such as provision for exceptional children, rehabilitation services, and veterans and adult education programs. More of the people of Florida are now being served.

The elementary school program in Florida has been extended to include younger children. The early years of childhood have long been recognized as especially important in the formation of attitudes and habits. The values

Kindergartens

of pre-school education become even clearer as research reveals more definitely the nature of personality development. Kindergarten provides many of these values for four and five year old children. It makes possible a more gradual, and therefore smoother induction into group living (learning to work and play with many others instead of being the center of attention at home). Kindergarten enlarges the experience and language background of children, thus preparing the way for successful reading in subsequent years. It provides for many children an earlier introduction to health services and growth in health information and practices.

Although there were a few kindergartens in the state before 1939, it was not until that year that legislation was enacted which permitted county boards to support kindergartens out of local and county funds. But funds were limited and few public school kindergartens were established.

Meanwhile, the Extended School Services, made possible by the Lanham Act (1942-46), were provided to facilitate meeting the war time need for women workers and at the same time provided constructive activities for their children. Florida acted promptly to establish centers for pre-school children, and in January, 1945, there was a total of 135 centers caring for approximately 3,000 children.

This war time experience demonstrated many values of pre-school education, and gave impetus to the demand for public school kindergartens. The Legislature of 1947 made provision for state support of kindergartens as a part of the regular educational program in any county giving certain additional tax support to its foundation program.

Eight counties are now participating with a total of 74 instruction units (1948-49). Further increase in kindergartens depends upon securing prepared teachers, sufficient building space, and the extension of public interest.

The secondary program has been extended upward to include the junior college years. Many people wish at least some of the benefits of a liberal education but they cannot afford to spend two or more years at distant colleges. Others wish four or more years of study but

Junior College

prefer part of it located in their home community. Still others wish technical or semi-professional study. The needs of these people are served by junior colleges offer-

ing two year programs. In 1947 amendments to the School Code provided for organizing and financing junior colleges as part of the county public school systems. The regulations specify that the junior college must be organized in such a way as to meet the needs of those who want terminal educational courses as well as the needs of those who plan to attend a senior college. These regulations also state that the standards for Florida junior colleges shall be the same as the junior college standards of the Southern Association of Colleges and Secondary Schools. The State Department of Education is prepared to furnish consultants to those counties considering the organization of junior colleges.

There are now four public junior colleges serving different parts of the state. One (Palm Beach) expanded its services during 1947-48; two (St. Petersburg and Chipola) converted from private, non-profit colleges to public institutions; the fourth (Pensacola) was organized for its first year of service in 1948-49.

Education is a never-ending process, limited only by the extent of individual degrees of proficiency and skill and individual desires. In the filling of the need of Florida's adults for additional and continued education and training, two points are clearly evident. First, that steps are being taken to provide adequate training and educational courses, and second; that Florida's adults are taking advantage of these courses.

Adult Education

Estimates of attendance in the various courses provided indicate that some 6,500 are enrolled in adult programs; and 2,523 of these are enrolled in the public school system. These adults are receiving instruction in such varied courses as general education, business training, farming, homemaking, mechanical trades, commercial subjects, the service trades; and even driver, police, and fireman training. If one wishes he may take an accelerated high school course leading toward a high school diploma.

Although there has been great progress in the field of adult education during recent years, much remains to be accomplished. The 1947 Legislature basing its enactments on a recommendation of the Florida Citizens Committee on Education, has provided the groundwork for a full and comprehensive program of education for the adult segment of Florida's population. It has recognized the need for a continuing educational program. This program has not as yet been fully implemented; it remains for the future to develop the master plan for serving all of Florida's citizens.

Immediately following the war a large group of people developed needs which could and had to be met by the Florida public school system. The already established procedures and practices did not fully adapt themselves

**Veteran
Education**

to the peculiar needs of the thousands of veterans who, because of war service, had interrupted their normal educational processes and had fallen years behind in professional and occupational development.

The Federal Government took the initial step to meet this need with the establishment of the veterans on-the-job and on-the-farm training programs. Florida, as the governmental unit directly responsible for putting the programs into practice, made them work.

More than 30,000 veterans have been enrolled in the on-the-job training program since its inception in 1945. At present more than 6,000 firms are offering training on the job to about 7,000 veterans in courses which have been approved by the state.

In addition to the on-the-job program, the State of Florida now provides related training for veterans. Under this program the veteran attends special study centers to further his knowledge of the occupation in which he is engaged. Study guides and progression charts covering more than 80 occupations are now available.

For the veteran inclined toward farming, the veteran on-the-farm program fills his need. Under the guidance of special veteran farming instructors, and with federal aid, the veterans receive training and instruction in farming and farming procedures. Current enrollment is 5,500.

In addition, for the veteran whose high school education was interrupted, the schools offer special public school courses on an accelerated, speed-up system, leading to a high school diploma. More than 2,000 veterans were enrolled last year in these courses. And the veteran can take general education development tests—while still in the armed forces if he desires—leading, as in the speed-up courses, to a high school diploma.

The primary purpose of the veterans program has been the bringing up-to-date in both educational and occupational endeavors those of our citizens who gave of their time for the general good by service in the armed forces. The successful completion of the veterans program is envisioned in the near future.

Vocational rehabilitation now covers a greater variety of services and reaches far more people than formerly. Vocational rehabilitation service is provided for the purpose of preparing handicapped persons for suitable employment and to help them find employment. It in-

**Vocational
Rehabilitation**

cludes (1) vocational guidance based upon a thorough medical examination and a case study of the disabled person's interests, aptitudes and experience; (2) training for a vocation; (3) surgery, hospitalization and treatment necessary to

remove or reduce a disability which is a vocational handicap; (4) artificial appliances necessary to enable the individual to work; (5) transportation, maintenance, training, supplies, etc., while the handicapped person is preparing for a vocation; and (6) assistance in finding a suitable job.

During the last 12 years, vocational rehabilitation in Florida has shown a marked increase in the number of persons rehabilitated and in this regard now ranks 11th from the top among the states. From July 1, 1936 to June 30, 1938, 314 handicapped persons were rehabilitated; in comparison, 2,479 persons were rehabilitated in the last biennium, an increase of nearly 800 per cent. The annual earnings of the 2,479 persons rehabilitated during the biennium were increased from \$1,048,792 to \$3,471,704, an increase of \$2,422,912.

Perhaps more important than the increase in the number of handicapped persons served was the development of a wider range of services. By State and Federal laws enacted during 1943, the Rehabilitation Division was enabled to provide through cooperation with doctors and hospitals, medical and surgical treatment required by individuals in order to become employable. All of these services, which have a direct vocational objective, are done only for the purpose of enabling persons to become self-supporting.

Until recently, exceptional children have been largely ignored in public school programs. Yet, exceptional children wear the same work clothes as other public school children in Florida. School laws amended in 1947 permit expanded educational facilities and services to educate children with deviations of a physical, mental, or emotional nature. These provisions are financed in the same manner as any instruction unit by state allotments for capital outlay and instruction. The "exceptional child" is now recognized in Florida as a public school responsibility who cannot be prepared to take his place in society without special educational attention.

Exceptional Children

Children who suffer from handicaps concerning impaired vision or hearing, speech irregularities, emotional difficulties, slow learning ability, physical conditions such as cerebral palsy and heart ailments are provided with a changed or adapted educational program. Where necessary, special materials and classrooms are provided to meet individual needs and equalize educational opportunities.

More than 3,000 exceptional children were given special instruction under this program in 1947.

I T HAS long been recognized that education is a continuing experience; that learning occurs at all times, every minute of every day of every year;

and that school, if it is best to present the student with the greatest of educational advantages, must be so designed as to make its services available for the greatest length of time.

The School Year

The length of the school day is man-made, as is the length of the term. And at its inception it was not designed so much to allow the necessary time to meet the needs of the students as it was designed not to interfere with other considerations of economic and social life. The standard three-months summer vacation, for instance, prevalent throughout the nation, is the result not of the need for a vacation from school but of the need for the student to work on the farm and in the fields during these summer months. Our present vacation-period is a hangover from the days when our nation was primarily agricultural and the school-child played an important economic role in harvesting the crops. In addition, student needs at that time were considered to consist of only 3 R's; the many other needs of children were yet to be recognized as the responsibility of the school.

Education throughout the nation is now moving to the point where a standard, lengthened school term and year-round opportunity for education and recreation will be offered, thus providing the student with more time to acquire information, participate in learning experiences, and satisfy more of his needs.

For many years in Florida the length of the school term varied among the 67 counties according to the whims of local governing bodies, the economy of the community, and the financial effort of the counties on behalf of their school systems.

The length of the term over the state has gradually increased from 142 days in 1924-25 to 180 full days of pupil instruction in 1947-48. The standard 180 day school term was set by the 1947 Legislature in the school law as a requirement for state financial aid under the Minimum Foundation Program. Not content with merely establishing a lengthened uniform school term for pupils, the Legislature also extended the number of days of teacher employment to 215 days each year, thus providing for better planning and evaluation.

To fill the need of year-round learning experiences—above and beyond the formal 180 day school term—plans have been made for the instituting of summer programs for school children and adults alike. Relatively new, the summer programs have made remarkable beginnings in many schools. The newly provided administrative and special instructional service units have done more than any single factor to make these expanded programs possible. The nature of these programs varies widely from community to community. In most instances considerable emphasis

Summer Programs

has been placed upon recreation. Among those experiences provided are directed play, arts and crafts, shop experience, music and library service. The conventional remedial classes for pupils who need additional opportunity to make up work and thus enable them to attain normal progress through school has figured largely in some programs. Some are pioneering with the development of camping programs. One or more school boards have secured sites to meet the trend in this phase of education.

MORE children are staying in school on higher grade levels than ever before. Statistics furnish unmistakable evidence of this increasing holding power of the Florida public schools. The ratio of first grade pupils to high school seniors in 1934-35 was 6 to 1 compared to a ratio of 3.5 to 1 in 1946-47. while a number of factors have contributed to this trend, no doubt the chief of which has been the ever greater appeal which the school is making to the growing youth of this state in recent years.

Schools' Holding Power

Both the enrollment and attendance results augur well for the statement that the schools are succeeding in more nearly meeting the needs of children and young people as well as appealing more strongly to their interests and ambitions. This has come about not alone as a result of modifications of the curriculum, and the expansion of transportation and school lunch and the like, but better trained teachers and more adequately equipped school plants have exerted both a pulling and holding power quite gratifying to all who watch with interest the ever improving Florida school system.

School and lay persons alike have long been concerned with what has been at times, the school's inability to meet the many needs of Florida's school children for their fullest growth and development. Progress in meeting these needs in Florida schools has been made possible by the voluntary cooperation of lay and educational agencies. Such school organizations as the Citizens Advisory Committee on Education, the State Courses of Study Committee, the many committees and sub-committees of the Florida Education Association, the School Board Members Association, the Florida universities and colleges, the Teacher Education Advisory Council, and the Florida State Department of Education, have all contributed in great measure to the expansion of the school program.

Cooperative Effort

Civic and social organizations and agencies have also played a great part in reaching common understandings which have permitted concerted action by all groups interested in education in offering school children greater learning opportunities. The contributions made by the Citizens Committee on Education, other civic organizations, the newspapers of the state, and the general public have served to assist in the expanded school program. The

Department of Agriculture, the Board of Forestry and Parks, the State Board of Health and other departments of state government have also played a great role in this program.

THE public schools of the country were founded to give instruction in the rudiments of reading, writing, and arithmetic, to supplement the efforts of the home in moral training, and to help weld the nation together through a common language and tradition. Boys and girls of today have these same intellectual needs but they also have other needs: physical (health and healthful surroundings), emotional (freedom from warping fears, prejudices, and unnecessary frustrations), social (ability to live and work with others for the maximum good of all). It is increasingly clear that these needs are interrelated; each depends on the other; no one can be attained by itself. These needs are still paramount, and efforts toward their satisfaction occupy a major part of the school day in Florida. Meeting the needs is the basis of the curriculum.

A child's curriculum, then, is not merely the sum of all the courses or subjects he takes; it is made up of all school experiences which aid him in learning. It includes all the educative experiences of the school day, not just those which occur in the classroom itself. What is learned on the playground, in the school dining room, in assembly is often just as educative as what goes on in the classroom. Whatever activities help a child meet his mental, physical, emotional and social needs are a legitimate part of the curriculum.

Furthermore, the term curriculum includes ways and means of doing as well as content. The way a class is organized, the provision for teacher-pupil planning, the degree of participation by students in carrying out proposed work are all educative and therefore should be a planned part of the curriculum. Some of the more recent trends in curriculum development in Florida have included emphasis on knowing the child as an individual, on flexible grouping within classes to help meet individual differences, on the use of a variety of procedures and materials as aids to learning, and on evaluation of all phases of child growth instead of the academic phases alone.

In recent years the Florida elementary and secondary schools have been organized around six major areas or streams of experience, each runs through all twelve grades; language arts, social studies, science, mathematics, health and physical education, and the arts. Four of these streams have been selected for treatment in the following paragraphs; there have been major developments in each area: Instruction in the language arts (speaking, reading, writing, spelling) has become more functional. Real life situations

Curriculum Development

Language Arts

involving communication form the center of language arts learning. The child has need for and makes immediate use of the skills he learns. The skills are learned and practiced in relationship to one another and to other subjects.

The development of language arts skills is a responsibility to be met in all twelve grades. English is the responsibility of every teacher at every grade level. Young people cannot acquire and maintain proficiency if language arts learnings are confined to certain parts of the day or to certain grade levels. The twelfth grade unit in English is often an elective and many schools offer a broad choice for specialization among such subjects as speech, dramatics, radio presentations, and debating.

In the primary grades especially, the concept of readiness for reading and other skills has developed. Readiness involves the acquiring of sufficient appropriate experience to form a background for understanding and skill. Too early pressure on young children to learn to read has often led them in subsequent years to personality maladjustments and emotional blocks in learning. Schools in Florida have moved in the past few years toward programs that permit children to make a more gradual approach to reading. Children thus inducted more often than not make an excellent adjustment to school and in later years are equal or superior to others in attainment.

The program in social studies during the past 10 years in Florida has also become more functional. The activities of the entire school day are used as means of learning. The fundamental purpose of social studies teaching is

Social Studies

growth in social behavior. The term social behavior includes changes in personal outlook, attitudes and interests of the children. It includes care of person and the development of satisfactory relationships with others.

Growth in social behavior is, of course, closely related to growth and social information (understanding and knowledge) and growth in techniques and skills (securing, organizing, and sharing information).

Social studies instruction in Florida has been characterized in the last few years by greater continuity from grade to grade. The social studies program has a twelve year scope. The persistent problems of living are studied throughout the twelve years, with emphasis upon the improvement of living. The theme of each grade reveals the expanding environment approach; first grade—living in the home and school; second—helping each other in the community; third—developing and improving the community; fourth—living in different types of communities, now and in earlier times, showing man's common needs in contrasting parts of our state and around the world; fifth—improving life in different regions of the United States; sixth—developing successful ways of living on a world basis; seventh—understanding the interaction of geographical factors with the way men live and work in the

Western hemisphere; eighth—the historical aspects of ways of living in the United States; ninth—civics, and analysis of community life and the responsibilities of citizens, with special emphasis on Florida government; tenth—world relationships; eleventh—American history; twelfth—problems of living in our democracy and its continued improvement. It will be noted that democratic values are emphasized throughout and that children study American history specifically on a recurring or cycle plan in the fifth, eighth and eleventh grades. Three units in social studies in the secondary school are required for graduation.

A development of unusual importance in Florida has been the Resource-Use Education Project carried on since 1944. Its theme is improving living for all Florida people through better use of both human and natural resources. The project has produced a text, **Florida: Wealth or Waste** for student use and a film by the same title. The project has also sponsored resource-use studies and workshops in several counties thereby aiding teachers to secure appropriate information and materials for the children.

Work in science in Florida schools during the past few years has been distinguished by an increase in the extent to which it is studied. Children in the elementary and junior high grades now have an opportunity to develop concepts and vocabulary in science suitable to their age level. Work in science has also been distinguished by an increase in scope. Early work in science is not limited to nature facts and animal stories. It is well-rounded, including the six major areas of science: the earth as a part of the universe, the earth and its changing conditions, matter and energy and their changes, conditions necessary to life, living things and their activities, man and his environment.

In Florida first-hand experiences are stressed throughout science study. Field trips, observation, experiments, visual aids, specimen, models and mock-ups are used increasingly. Pupils reach secondary schools now with a much richer background of experience in science than in former years.

In the Florida secondary schools the program has broadened to include the general education values of science as well as the technical side. Every student has need for common understandings from science regarding his surroundings and regarding the impact of scientific invention and discovery upon the ways we live. The understandings are developed in general science or biology courses required of all students. The needs of students desiring technical science are met through courses in physics, chemistry, and applied sciences.

Mathematics is another area in which more functional approach in Florida schools is made now than in former years. More stress is put upon meaning and less upon computation speed for its own sake. The basis of meaning

is recognized as coming from first-hand experience. Therefore elementary children, who are in the process of forming concepts of number and number processes, are given many direct experiences in situations demand-

Mathematics

ing the use of mathematics. They have to use numbers in order to go ahead with their plans. The social value and use of numbers is stressed. Problems in books are more practical than formerly. They are centered about real life activities of children. Large illustrations show applications in modern industry.

Many concepts in mathematics are complex and develop only gradually over a period of time. They need to be introduced early in simple uses long before the child is called upon to manipulate processes rapidly in order to use the concept. Thus, in Florida percentage is introduced in the first grade when the teacher talks about daily attendance. An intermediate child who figures batting averages is really performing percentage processes. With a thorough experience background, children are then ready to study percentage formally.

In addition to the material offered in Florida secondary schools being more realistic the curriculum offerings have been broadened. Ninth grade pupils have a choice of algebra or general mathematics which puts emphasis on applied number. At the twelfth grade level most schools now offer courses in essentials of mathematics or consumer mathematics. Meanwhile the senior high continues to offer algebra and geometry for those students who have need for technical use of mathematics.

Many other subjects and experiences offered the school child during his day in school act, in varying degrees, to fulfill his growing needs.

There has been a changing concept in recent years as to what should constitute the total school program for the school child. It is now generally recognized that every activity in which a child participates affects his total

Other Curricular Developments

development. With that in view the school child is now offered experiences in such fields and subjects as home economics, vocational agriculture, trade and industrial education, industrial arts, driver training and education, physical education, health and safety, music, and other

educational fields. The school child is benefited by his experiences in learning how to cook, keep house, market and conserve food and clothing; he can learn how to farm, operate a tractor, manage poultry, livestock, citrus groves, and general farm enterprises; he can learn how to fix a watch, repair airplane engines, run a hotel, make a chair, build or repair a house, or sell merchandise; he can learn how to make bookends, saw a piece of wood, design shelves, bore a hole; he can receive instruction in driving a car or truck

competently and with safety; he can develop his body in physical education classes, develop bodily health and grace, learn how to play with others, how to accept both victory and defeat in a sportsmanlike way; he can understand health and safety standards, develop good habits of personal and home hygiene; he can grow in aesthetic appreciation, skill and creative expression; he is offered the opportunity of learning about the outdoors, participating in summer recreation with others of his own age group who have common interests; he can learn, first-hand, about his community, state, and nation; and he can discover and utilize resources in his own and neighboring communities.

With all these expanding learning opportunities there has developed a need for personal, social and vocational pupil guidance. Teachers have become increasingly aware of opportunities and obligations to provide guidance in all of the activities of the child during the school day. To assist the teacher in attaining this end the number of pupils in each class for which the teacher is responsible has been reduced somewhat to allow more time for individual attention to pupils.

Through the means of the school lunch program now offered in schools it is possible for large numbers of children to receive a full and nutritiously balanced meal at least once daily, and to participate with members of their own group in social settings familiar to all. Some school

School Lunch lunch programs in Florida are much more than 12 years old, nevertheless, school lunch programs in the state have been the official responsibility of the public schools only since May 1, 1943, when the State Department of Education established a school lunch office. Today nearly half of Florida's schools operate school lunch programs and as a result have healthier children to teach. We see school lunch experiences spreading into all grade levels and subject areas giving interest and enrichment to children's learning and becoming an effective tool for helping children grow mentally as well as physically. The school lunch program has been of inestimable value in improving not only the quality of the diet of the school child but in giving the teacher a clearer concept of the importance of the school lunch program to child growth and development. The child is benefited by school lunch experiences in learning nutrition, sanitation, social, aesthetic, and spiritual values. He also has opportunities for growth in understanding of resource education, homemaking, agriculture, music, art and business education and many other areas. In 1944 approximately 50,500 children received plate lunches. The peak number reached in 1946-47 was 102,471 and in 1947-48, 123,981. Each year the adequacy of the lunches served also continued to increase.

BETTER opportunities for learning are now offered Florida's school children because of the better training and preparation of Florida's school teachers. That Florida school teachers today are better prepared to meet the challenge which faces them than ever before is evidenced in the increased education and training of the teachers. In 1945 only 62% of the teachers in Florida schools were college graduates. Last year, the latest figures available at this time, 81% or 10,410 of the state's white teachers and 67%, or 2,762 of the state' negro teachers, held college degrees. This is an average of 78%, an increase of 16% over the figures for 1945-46.

Better Teachers

Many of the teachers over the state have progressed further than the four year degree and have completed one or more years of post graduate training; the experience and knowledge gained in these additional years to be passed on to the student. It is evident that all teachers of Florida will be college graduates in the years ahead. It is interesting to note also that at least college graduation will soon be the minimum educational standard for county superintendents.

"The recent primary election results together with interim appointments provide a basis for prediction of the change which will take place in the educational status of superintendents in 1948-49 over that of 1946-47. The following figures furnish an interesting basis for comparison:

	1946-47	1947-48
Masters Degree	13	21
Four-year Degree	28	37
No Degree	26	9

Two factors influence the increased preparation of teachers in Florida. They are the monetary gains provided under the Minimum Foundation Program wherein the better-trained teacher is eligible for highest salaries, and the interest on the part of the teachers themselves to best serve the school child.

Not only does the increase in college and formal school training of teachers act to improve the learning opportunities of pupils, but the teacher training of our instructors is now more realistic. Through the internship and in-service teacher programs teachers have been able to improve their instruction qualifications by actual on the job experiences, both after their employment and during the pre-teaching years.

To assist the teachers and cooperate with them in self-improvement are such organizations as the Teacher Education Advisory Council (established by the 1947 Legislature to study teacher education problems and recommend improvements) and the many educational organizations of the Florida Education Association and the State Department of Education. Many of the

significant steps in teacher-quality improvement have been recommended by these organizations.

In addition, the school child in Florida is benefited by the fact that there is now better selectivity of teachers operating in his behalf. In 1870 two years after the post civil war system of common schools was first established in Florida, qualifications for teachers were virtually non-existent, and all one needed was a little more knowledge than the student and of course the urge to be a teacher.

Many factors have contributed to the greater selectivity of Florida teachers, not the least of which are the higher salaries now paid the instructor in the state. The average pay of teachers in Florida last year was \$2,629.00 with many teachers earning more. This is contrasted with an average of only \$1,928.00 in 1946-47.

Welfare and Security of Teachers

In addition, the school teacher in the state is now offered the benefit of one of the most liberal retirement systems in the nation, a liberal sick and professional leave policy and a reduced teaching load. Also contributing to the improvement of teacher selectivity is the fact that the new school bill's provisions for more pay for better trained teachers, offers an incentive to teachers to improve themselves, dispels the old thought that "the teaching position is the end of the line" and permits greater opportunity for personal advancement.

The teacher recruitment program and teacher scholarships have also had their effect in inducing persons to enter into and remain in the profession of teaching.

In 1947 scholarship examinations were taken by 1163 persons while 1212 took them in 1948. Of course, not that many scholarships were awarded, but a growing interest in teaching as a life work is indicated. Future Teacher Clubs have been organized in several high schools. More teachers are exercising guidance in the direction of teacher recruitment.

The school teacher now is offered opportunities for continued professional study to improve ability to teach while actually employed in the teaching capacity. Many steps have been taken under the leadership of the State Department of Education, with the cooperation of other agencies, to offer the teacher developmental opportunities. To that end, teachers now engage in pre-school conferences, workshops, and in the development of curriculum guides and bulletins on educational techniques.

Teacher Growth and Supervision

To assist the teacher in solving local school problems the State Supervisory Program was set up by the 1945 and 1947 Legislatures. Under the mandatory provisions of law supervision was expanded both at state and county levels. Noted as one of the best programs of its kind in the nation the

supervisors work with the classroom teachers in designing programs of study, and solving local teaching problems. Together they work to improve the quality of instruction in the school and to provide a total school environment which will be conducive to pupil learning. Leadership provided at the state level has done much to stimulate in-service growth of teachers and to bring improved teaching to Florida classrooms. In addition to their in-service opportunities the teachers also are encouraged to attend summer schools maintained at the teacher-training institutions; often they are assisted by scholarship funds set up by the state for that purpose.

Economically secure the teacher in Florida now has a personal and professional outlook far brighter than in the past. The higher salaries now being offered, the liberal retirement benefits, the high professional standing of the school system to which he belongs, and the sincere and high respect of the community in which he lives and works have all contributed to his well being and peace of mind. This feeling of security has resulted in better teaching attitudes and methods; the economically secure teacher is more emotionally stable and does a better job of teaching; as a result, the school child in the classroom has improved advantages.

BETTER supporting facilities for education in Florida are everywhere in greater evidence than ever before. The people of the state have realized increasingly that good supporting facilities, in addition to good teachers, are necessary to a good educational program.

Supporting facilities as here defined relate to the physical properties with which education is concerned and to the auxiliary services which have been sponsored for their better utilization. The reference here is more particularly to school buildings, facilities, equipment, grounds, materials of instruction and transportation services.

Ten years ago the total value of school real estate in Florida was estimated to be \$90,000,000, or a total investment of \$2,035.26 per pupil. Today the total Florida investment in school plant is estimated to be \$102,543,471 or \$2,295.72 per pupil.

The cumulative need for better school housing facilities for Florida's children created by increasing school populations and lags in construction during the war and after has been conservatively estimated to be

\$200,000,000.00. Despite the magnitude of the building

School

Housing

job ahead there is real hope now that the money will be spent in terms of defensible pupil needs and not wasted on untimely, badly planned school building

projects like those which characterized the ten years which followed World War I. School buildings, recently completed, underway, and those of the future for Florida youth will be better located, better planned, better con-

structed and in every way more closely related to the needs of Florida's developing school program.

In Florida new buildings now may be erected only after careful appraisal of sites in terms of immediate and expanding needs for well located space. Before approval of any site, detailed study is required of local population trends; safety factors; drainage, sewerage and general health; and road configuration and other conditions which would affect accessibility. All factors are studied by competent survey staffs in cooperation with members of the local school system and citizens of the community.

Schools are better constructed and planned for use of students as a result of permissive legislation and regulatory authority vested in the State Board and exercised by the Department of Education in cooperation with local school authorities.

Plans for each new building are carefully checked in the Department of Education to eliminate all avoidable hazards to the health and safety of school children. Construction details are planned for maximum protection and safety of those who use the building.

Florida children may expect to attend school in buildings which have been designed to provide a maximum of comfort and convenience as well as safety. Buildings which are being planned now will be well lighted, ventilated and heated. They are being planned not only to accommodate the formal curricular offerings of the schools but also those less formal activities of pupils which are carried on as a part of the educational program. In addition, the growing community uses of the school plant are recognized and the buildings are being designed to carry out the concept that the school is the educational center for the entire community. Playground areas are being planned in the light of the needs for the physical education program as well as for those uses which are purely recreational.

A better classroom environment is provided for the pupils who attend schools. Classrooms are designed for use. Modern principles of lighting are provided to enable optimum vision and to avoid eye strain for the children. Artificial lighting is used to bring up the foot candle power of each room to satisfactory minimums. Provision for adequate heat and ventilation are made for each room.

Classrooms are strategically located to provide convenience of access. Chalkboards, movable furniture, storage space, and work space for each room are all a part of a master plan for a functioning program.

Modern educational theory and practice in Florida recognize that a child learns through all of his senses and that every sensory and motor experience

contributes to his total development. To that end there is a continuing effort

Instructional Materials

to see that classrooms, schools and school systems are provided not only with a quantity of materials but also materials of the kind, quality, and design which will contribute most to pupil growth. Textbooks, library books, motion picture films, film strips, slides, stereographs, flat pictures, maps, globes, charts, recordings and other purchasable material in the hands of capable teachers have been meaningful to the program of education in Florida and increasingly will be used as a learning aids not to be used in isolation from the curriculum but as a dynamic functioning part of it.

Textbooks and some library books have been furnished by the state over a period of years. These have been carefully selected for the past twelve years under approved professional methods not only with an eye to the scholarship of the authors but with an understanding of the differentiated needs of pupils for materials which would be most useful in their well rounded growth and development.

Books have been made available to pupils of such kinds and in such quantity that neither individuals nor groups need be handicapped by shortages of essential materials. Pupils are instructed in the care of books; policies and procedures for use of books have been formulated and are in force; complete and accurate records of books which have been distributed are maintained and pupil responsibility is encouraged. The state's investment in property is protected by the application of uniform principles of pupil accountability for use and care of books.

Responsibility for provision of other instructional materials and equipment for pupil and classroom use has been assigned by tradition and statute to the local school systems. As a result many systems have excellent programs, others are less satisfactorily equipped and managed.

It should be understood, however, that pupils are not dependent entirely upon provision of purchasable material for their multisensory experiences. Community resources are discovered and utilized to an ever increasing degree in the Florida schools. All around every school community and its environs may be found hundreds of materials which may be used as they are or fashioned for use in the program of education.

Both teachers and pupils are growing and developing through exploration and uses of the community and its educational resources.

Obviously every child ought to have an opportunity to attend school under circumstances and conditions which are designed to promote the greatest mental, physical and emotional growth and development. This is not easy,

**Satisfactory
Schools**

however, as there is not nearly enough money available for education to provide all the desirable facilities at all of the places people might reasonably wish to establish schools. It is possible though to establish fewer

schools in such locations so that these advantages can be made available to a large number of people. Rural pupils now have the advantages that formerly were possible only for their urban neighbors. Through careful designation of attendance areas, increasingly large numbers of Florida's boys and girls have a safe, comfortable ride to schools which offer them infinitely more in the way of educational opportunities than could be offered if the fiscal resources of the school systems were diffused in a great many small unsatisfactory schools. It is possible too in these larger schools to do more than would be possible to do for children in small schools in the way of instructional materials, equipment laboratories, libraries and other physical aids to the learning process. For example, for the same number of pupils in a large school, one projector might serve whereas if the children were attending five or more smaller schools it would be desirable to purchase at least five projectors; the same would be true of films, reference works, static machines and the thousand and one other items of school supply and equipment that may be used by groups.

At the same time the boys and girls in the larger schools may enjoy and use more in the way of physical property for educational ends; they also may have advantages in the way of supervision, specialized teaching, clinical and personal guidance. Florida boys and girls who have the advantages of attending these larger schools also may receive more in terms of provision for social entertainment and recreation.

Since Florida people cannot take the best in education to every child's door, they have elected the next best step and have taken the child through transportation facilities to schools where the best education has to offer may be available for him. 107,583 children now ride to school on

**School
Transportation**

buses and the number is increasing annually as small unsatisfactory schools are merged or new schools serving wider areas are erected to take their places. The overall increase in 1947-48 over 1946-47 was 9%.

Great care has been exercised to assure that the buses on which the pupils ride are comfortable and as safe as human ingenuity can make them. That they have been safe is a source of constant satisfaction to those who labor in education as well as to the families of the children who ride to school. During the past ten years despite a high fatality rate for general traffic in Florida not a single school child has lost his life while riding on a school bus. The child who is transported not only receives a safe ride to school but also a convenient and comfortable ride insofar as school offi-

ciala can provide comfort and convenience. Routes are planned and scheduled so that a child rarely will have a fatiguing day because of a prolonged ride.

BETTER use of educational funds means better education for boys and girls. The more wisely funds are used the further they will go—the more educational materials, facilities, and services they will buy. Conversely the more carelessly or loosely educational funds are used the poorer the pupil opportunities and the fewer educational materials, facilities, and services may be purchased. Under this type of management the child, his community, his county, and his state are cheated.

The educational authorities in Florida have realized that schools and the school programs to be effective instruments must be administered honestly and efficiently. To that end legislation has been sponsored and policies and procedures have been formulated and established.

In 1937 school leaders all over Florida realize as keenly as they do today education's obligation to the children, youth and adults of the state. They had a vision of their opportunities for service and their obligations to school pupils and to society, but it was difficult to translate those visions into purposeful action. School systems were deeply mired in debt and each year they were going into debt more deeply. To aggravate a situation already bad the state had never under the instruction unit law paid its appropriations in full. In aggregate at the beginning of the school year 1937-38 the school systems of Florida owed \$55,820,622.00. Budgets were largely instruments of unfulfilled promises. Schools were understaffed, and underequipped; teachers were underpaid and dissatisfied. Under these conditions it is not surprising that levels of achievement in the state were not of the highest; nor is it surprising that under the measurements used by educational authorities to estimate the worth and efficiency of state school systems Florida failed to rate among the best.

All who understood the situation and had the interests of education at heart agreed that education could not continue permanently without stable financial support and assurance that the funds appropriated would be used only for educational purposes.

For this reason the Legislature of 1937 was asked to enact a legal framework for acceptable fiscal administration. This was done and succeeding legislatures have supplemented and improved these legislative provisions. Among the legislative contributions over the years have been increased appropriations, budget control provisions, laws governing bond debt, public school transportation, textbook purchase, school surveys, and accounting. It should be pointed out also that in providing a fiscal floor for education at the state level the local tax structure and necessity for local support was not

forgotten. Through the tax reforms enacted by the 1941 legislature, counties have a leeway to do more for their own schools than ever before.

In the decade prior to 1948, despite a program of educational expansion and mounting school enrollments, the total indebtedness against Florida schools was decreased from \$55,820,622 to \$43,684,612 or a total of approximately eighteen million dollars. This has been accomplished through careful budgetary controls and fiscal procedure and by refinancing both capital and current debt.

School Finance

Budget control was the most significant advance made in school finance in the decade between 1938 and 1948. The School Budget Act of 1937 put accounting on an accrual basis and provided penalties for failure to observe the budget law.

Forms and records were devised to enable local school officials as well as the State Department to obtain at a glance the status of a county's financial condition, to observe trends toward over-expenditure, and to curtail unnecessary expense. These are further treated in the next section. On July 1, 1938, the State Board of Education adopted a set of accounting forms which were simpler and more elastic than the ones previously used. Periodic statements by account classification of receipts and expenditures were required by state board regulation.

Annual financial reports based on the year's operations make it possible for the State Superintendent to report biennially for the informing of citizens, legislators, educators, and the U. S. Office of Education.

In summary, the budget procedure and reporting instituted early in the decade have been the central determining factors in fiscal school government efficiency. Consultative and advisory services furnished by the Department of Education both from its Capitol Offices and through field representatives have done much to establish and consolidate the gains made through legislation and State Board regulation. In addition to provision for supervisory field services, the Department has arranged for conferences of county superintendents and principals for administrative consultation and study, for recognition and organization of school finance officers, and for assembly and study opportunities for these and other administrative employees. One of the most satisfactory outcomes of these conferences has been the development of policies, principles and procedures for internal accounting. Another has been the development of habits of cooperative work on problems of common interest.

Through school bus law regulations, fiscal enablement, and good supervision and administration the transportation program has been extended and expanded. The gains have been both quantitative and qualitative.

While bus bodies of wood and composite construction have decreased

from 406 in 1938 to 59 in 1949, the number of bus bodies of all steel construction have been increased from 931 in 1938 to 1468 in 1949. Gains have

**Transportation
Administration**

been made in the number of pupils transported, in a higher ratio of attendance of transported pupils; in linear feet of seating, in number of miles traveled and and number miles of hard surfaced roads, amounts of insurance carried per pupil and per bus load. Qualitative gains for pupils have been made in procurement of larger, safer, cleaner, more comfortable buses. Safety, comfort and convenience have been better assured through central maintenance and through inspection and supervision on the part of county and state authorities.

The counties of the state are rapidly moving from contract of school bus routes to county ownership of school buses and central county control of the transportation services. Bus purchase procedures including those for gasoline, oils, tires and parts have been developed to give the county units a purchase privilege at the best prices and in the best markets. Under this system it is possible for the counties to operate their own buses at lower figures than it would be possible for private contractors to quote. County ownership not only makes it more readily possible to assure the safety of the children by central maintenance and inspection but also it permits the school authorities to choose the types and kinds of equipment in which the children will be transported.

Free textbooks are furnished in Florida throughout the twelve grades of public school. Textbook contracts are made for a period of three years and an indefinite time thereafter. This provision gives the contracts a con-

**Free
Textbooks**

tinuing status and permits the state to retain books which are giving satisfaction after the period of guarantee without recourse to adoption. At the same time the three year period of adoption permits early change in the event of weaknesses in the textbooks which have been adopted or in the event newer and better materials in the subject field are published and available.

Books under contract are purchased from the Florida Depository of the publisher f.o.b. Jacksonville at the lowest prices they are sold anywhere in the nation including the prices charged f.o.b. the publisher's own central shipping points.

Contracts are protected by bonds underwritten by state approved surety companies.

Through careful allocation, accounting and conservation procedures together with planned cooperative provisions for distribution and use Florida maintains for textbooks one of the lowest cost per pupil in the nation but at the same time provides adequately for all reasonable pupil needs.

Prior to 1945 Florida's monetary contributions to the public school systems of the state were strictly limited to funds for teachers' salaries and public school transportation. The 1945 Legislature established a small foundation program in which slightly more than half of the counties participated and which broadened the use of state funds somewhat to include a limited amount of current expense for any proper school needs except for sites, buildings and debt service.

However, in 1947 the Minimum Foundation Program law provided for joint contribution of state and counties to four general educational purposes: teachers' salaries, transportation, other current costs, and capital outlay.

School Surveys

Under the Act the State Board of Education was directed to formulate and establish the policies, rules and regulations under which the funds would be distributed and expended.

The State Legislature and the State Board of Education, conscious of the fact that Florida in the 1920's had spent millions of dollars on improperly located buildings—buildings which often were unsafe and unsanitary and which were paid for at the highest levels of land values and construction costs—felt that safeguards should be established to assure proper expenditures of the capital outlay funds. Furthermore they felt that future building construction in Florida should be planned not only with due regard to economies but also to emerging needs in education.

Present laws were anticipated and foreshadowed by legislation in 1939 which required periodic surveys together with annual and long time plans. Under the State Board rules and regulations as prerequisite to expenditure of capital outlay funds in the Minimum Foundation Program, each county board must prepare a plan for such expenditure based upon a survey of physical plant, facilities, school population trends, and fiscal resources. These surveys are cooperatively undertaken by local school officials and members of the Department of Education. The purpose of each survey is to assure the people of the state and county that full value will be received for every dollar expended and that the school buildings which are constructed or altered will meet the educational needs of the respective communities.

Under the survey plan the state has insisted upon the right of the local people to control and to determine the character of their institutions. The state has said, however, that before any capital outlay expenditure is made an acceptable plan must be formulated by the local school government and approved by the State Board on the basis of survey findings and recommendations by the Department of Education. The plan must show that such expenditures—except for isolated schools—are for schools in which the cost of providing a wide variety of subjects; adequate libraries, and laboratories; teaching; supervisory and administrative services are not excessively high.

Surveys have been completed in 41 counties and are virtually complete in two others. In the remaining 24 counties surveys will be undertaken in the near future.

There has been some criticism in small communities of the restrictions placed upon expenditure of capital outlay funds but it should be remembered that the Foundation Program is the state's guarantee that every child shall have at least a minimum opportunity for an education. If some schools in a system are maintained at unjustifiable levels of cost for each pupil all pupils in the county are penalized and the state will have failed to fulfill a part of its pledge.

The comprehensive survey scientifically and cooperatively made is one of the most important means of insuring that the Minimum Foundation Program will live up to its guarantees to Florida's school children.

THE development of education in Florida has been a living demonstration of democratic procedure, setting a pattern of living for the children in the schools.

Not only is special effort made during the school day in setting proper democratic patterns and providing examples of democratic living but Florida teachers, principals, and administrative personnel in education work at democracy on a 24-hour basis. Florida's great improvement of her educational system is itself the result of democratic procedures and patterns.

Democratic Procedures

During the past twelve years the schools of Florida have been administered on a "cooperative basis" with all school people advised and counselled on changes in policy and procedure. Under the leadership of the State Department of Education, whose watchword has been "leadership and counsel" and not "direction and control," citizens and lay persons from throughout the state in all walks of life and all fields of endeavor, have been offered the opportunity of contributing to the progress in education.

The State Department of Education consists of former teachers, principals, county superintendents of public instruction, and college and university instructors, chosen from the various school fields and geographic sections of the state. They represent a cross-section of Florida—thinking and public opinion within themselves. This democratic selection of personnel contributes greatly to the progress of education. As a result, the policies now in effect in the state represent the thinking not only of state department personnel but also of the people who will have to abide by these decisions.

The colleges and universities in the state, too, are called upon often for assistance and cooperative thinking in educational undertakings. So closely allied to the public school system that they must, perforce, work together

often, the universities and colleges provide representatives for almost all public school committees. And many members of the system of higher education are on call daily to the state department as consultants.

The public, too, has taken a part in the development of the school system. Although the public schools affect almost every family directly and every family indirectly, the people of the state have not always been active in school affairs. To change this situation citizens have been appointed to numerous educational committees by the Department of Education and have played a significant role in the development of educational plans, programs, and policies.

It is significant to note that the public, for the first time in many years offered a part in the educational program, has earned much of the credit for Florida's 1947 school program. Offered and opportunity to participate in the program through the Citizens Committee on Education prominent lay citizens gave of their time and effort to study the state school system and make recommendations for its improvement. The newspapers of the state joined the fight and many thousands upon thousands of columns were devoted to the needs of the school system and plans for the system's improvement. And the people, too, showed their enthusiasm and interest at the meetings held in every county to discuss the needed school changes. Their approval of the plans for school improvement were concretely manifested in the 1947 Florida Legislature when an omnibus school bill, embodying more school improvements in one bill than had been enacted into law in many successive sessions, was passed by the Florida Senate and House of Representatives with but one dissenting vote.

And this public approval was in face of the fact that the new school bill calling for \$42,000,000 this year, meant more and heavier taxes. The approval by the people of the plans for the improvement of Florida's schools represents a victory for democratic action.

EDUCATION changes in ideals—with ever widening horizons. That which is really best for the child in his all-round development is rapidly coming to be regarded as being for the best interests of the state and the nation.

Prospects

As we come to understand the nature of the child more completely we see wherein his welfare and the healthy development of democracy are inseparably united. Education has become more democratic—more humane and, therefore, more functional in the lives of all the people.

Emphasis upon the skills with which to make a living have been supplemented with understandings and appreciations whereby better lives may be lived. The curriculum of Florida schools demonstrates this trend. Moreover,

the points of view and the procedures of our teachers even more conclusively reflect this change for the better.

Under Florida's Minimum Foundation Program improved educational advantages are being carried to the children wherever they may live—whether in the more fortunate or in the less wealthy sections of Florida.

No longer are the people of this state satisfied with the extent and quality of the educational opportunities of a former day. For a new day an expanded and improved program of instruction is necessary. Evidences of the desired results are coming from the statements of parents, the general public, and last but not least the pupils themselves.

* All-Day School Teachers also teach the Day-Unit, Part-Time, and Evening Classes.

Note: In addition to the regular program, teachers of vocational agriculture have acted as organizers, local supervisors and teacher-trainers in the Veterans' On-the-Farm Training Program in Florida. At present there are approximately 257 classes in agriculture for Veterans operating under the State Department of Education and using the local facilities of the vocational agriculture departments for class-room and farm shop instruction of approximately 4,500 Veteran trainees. This program is being carried out under provisions of Public Laws No. 346 and 377. The facilities of the vocational agriculture departments are, as a whole, in constant use from 8:00 a.m. to 12:00 midnight daily except Saturdays and Sundays.

† Only Federal Reimbursement shown. State Reimbursement included in Foundation Funds.

(1) Prior to 1938-39 Vocational refunds, State and Federal, are assumed to be equal in amount. Refunds for 1919-20 and 1924-25 taken from report of Director of Vocational Education.

(2) Prior to 1933-34 Taxes and Tax Redemptions were not reported separately.

(3) Includes Bond Interests and Sinking Fund receipts.

(4) Prior to 1933-34 District Support and Maintenance and District Interest and Sinking Funds were not separated. For the years 1924-25 to 1932-33, inclusive, these were divided on the basis of percentage levy for Debt Service and Maintenance against the total collection as reported by the County Superintendents.

(5) Includes Revenue Receipts reported under Bond Construction Funds in years prior to 1943-44.

(6) Prior to 1933-34 Non-Revenue Receipts from Support and Maintenance Funds, District and Interest Sinking Funds, and District Bond Construction Funds were not reported separately.

(7) Includes \$14,436 reported as Racing Commission Funds.

(8) Philanthropic Funds included in incidentals beginning with 1944-45: \$650 in 1944-45; \$1,850 in 1945-46; \$1,650 in 1946-47; \$1,600 in 1947-48.

(9) Includes County and District taxes.

- (1) General Control not comparable with subsequent years because of change in classification of accounts.
 (2) This amount could not be distributed among items of current expenditures for the reason that prior to 1929-30 present classification of accounts was not in use.
 (3) Prior to 1933-34 disbursements from Support and Maintenance Funds, District Interest and Sinking Funds, and District Bond Construction Funds were not reported separately.
 (4) Since 1937-38 accounts of funds for the Support and Maintenance of Schools have been on an accrual basis.
 (5) Does not include other items such as Purchase of Investments, Liquid Investments, Frozen Balances, Transfers, etc., after 1937-38.
 (6) Unreconciled difference—Receipts and Expenditures.
 (7) Includes \$138,496 expended for maintenance.

11. NUMBER SCHOOL DISTRICTS LEVYING TAX.....				853	823	736	738	720	703	669	650	

(1) Salaries reported prior to 1937-38 represent actual annual disbursements and in some years salaries contracted for were not paid in full. Since 1937-38 accounts have been on an accrual basis and amounts represent actual disbursements plus obligations incurred during the year. Amounts given for each year include salaries of Supervisors, Principals, and Teachers.

(2) Prior to 1936-37 disbursements for transportation reported under Auxiliary Agencies included operation and new buses. Beginning with 1936-37 payments for new buses have been reported under Capital Outlay, and since 1939-40 Insurance has been reported under Fixed Charges.

(3) Amounts paid for new buses, reported under Capital Outlay, not included in current expenses after 1936-37.

(4) Original cost of school property estimated after 1936-37.

(5) Payments reported for Interest-30 to 1931-32 evidently include interest on bonds and time warrants, as well as current interest.

(6) Beginning with 1933-34 fees for Collectors and Assessors for Interest and Sinking Fund Taxes are included, but are not included after 1937-38.

(7) Includes operation expenses, insurance, and estimated cost of depreciation.

(8) From Statistics of State School Systems, U.S. Office of Education. (Current expenses include administration costs of State Departments in U.S. averages.)

(9) The base for calculation includes salaries paid White Supervisors who supervised Negro Schools, which was charged to the cost of Negro education.

(10) The base for calculation does not include salaries paid White Supervisors who supervised Negro Schools.

(11) Average (including Supervisors) cannot be computed separately for white and negro since in some counties general supervisors have supervision over both races.

* Day Schools.
